

# PRÉIME®

## Regenerative Aesthetics

Powered by Pure Technology™

MONESTHETICA

# Scientifically formulated, expertly designed solutions

Préime offers a curated range of topically-applied professional solutions that deliver the potency of clinically proven ingredients in their purest form. Préime DermaCeuticals represent a fusion of advanced scientific research and natural efficacy.

Préime have identified three 'best-in-class' cutting-edge regenerative actives that support skin regeneration. Each can be used as a standalone treatment or to synergistically enhance the outcomes of other aesthetic procedures.

## HUMAN-SOURCED EXOSOMES

The youngest and purest exosomes containing the most potent bioactive molecules to support skin regeneration.

## NUCLEOTIDES (SALMON PDRN)

Powerful anti-inflammatory and tissue repairing molecules that boost skin rejuvenation and recovery.

## PLANT-BASED BIO-EXOSOMES

Encapsulated nanosized extracellular vesicles that have regenerative, anti-inflammatory and antioxidant effects.

# Powered by Préime Pure Technology™

## Unmatched Purity, Unrivalled Potency, Unparalleled Results.

Pure Technology™ is the foundation of Préime's regenerative range of skincare solutions, featuring potent, topically-applied regenerative actives; exosomes and nucleotides, in their purest form.

These cutting-edge actives support the skin's natural rejuvenation processes for a global anti-ageing effect and healthier-looking complexion.

Pure Technology™ is defined by the **SCOPES System**, which provides a framework for comparing regenerative actives. It was developed in conjunction with biochemists and the world's top exosome scientists to distill complex science into practical and meaningful terms.

## HUMAN-SOURCED EXOSOMES

Exosomes are nanosized extracellular vesicles that play an essential role in cell-to-cell communication. Applied topically, they transport an array of proteins, nucleic acids, growth factors and lipids to signal repair and regeneration. Prême harnesses the restorative power of potent exosomes in their purest form, to support the skin's own regenerative processes for a global anti-ageing effect and strengthened skin barrier function. Prême's Pure Exosomes can be used as a powerful standalone treatment or to enhance the results and recovery of other procedures and devices.

**SOURCE:** Human umbilical cord blood plasma contains the youngest and most potent derivation of exosomes created by both epithelial and mesenchymal stem cells. These contain the highest quality of bioactive molecules that are compatible and easily recognised by human cells, and biologically relevant to the skin.

**CONCENTRATION:** Purity allows for greater efficacy and better results with a concentration of 33 million actual exosomes, not billions of 'particles'. Such 'particles' include remnant proteins, cells and other unwanted particulates that are not technically exosomes.

**ORIGIN:** The origin of the cord blood is ethical, traceable, and clean. Donations are collected under sterile conditions from healthy individuals at time of birth by an accredited US-based collection bank. The cord blood is processed under strict quality control measures and meticulously screened for communicable diseases.

**PURITY:** Pure exosomes are isolated using a patented pure extraction technique, that does not involve cell culturing or extra processing that can damage exosomes. Exosomes that were created naturally in-utero are collected without introducing foreign protein contaminants that can trigger an immune response.

**EFFICACY:** Human umbilical cord blood plasma is the most powerful source of exosomes, containing the best quality of bioactive molecules, harnessing superior regenerative potential. This potent source combined with the pure extraction technique to maintain the integrity and purity of the exosomes, results in a consistent quality and quantity that supports overall skin health.

**STABILITY:** The patented pure extraction technique allows exosomes to remain stable for up to two years at room temperature without the need for freeze-drying and reconstitution, which can damage exosomes and create cellular debris and contamination.

## IN-CLINIC

### PURE EXOSOME SOLUTION

A regenerative solution featuring 33 million of the youngest, purest and most potent exosomes to support the skin's natural regenerative processes for a global anti-ageing effect. Suitable as a powerful standalone treatment or to enhance the results and recovery of other procedures.

# EXOSOME

## AT-HOME

### PURE ELIXIR FACE SERUM

Specially formulated with 10 million pure exosomes to support skin regeneration and brighten the complexion, while helping to visibly reduce the appearance of fine lines and wrinkles. This next-generation serum is formulated with niacinamide and plant extracts to even skin tone and help replenish and regenerate the skin.

PURE EXOSOMES + NIACINAMIDE + PLANT EXTRACTS +

### PURE ELIXIR FACE MOISTURIZER

Specially formulated with 4 million pure exosomes to support skin regeneration and boost hydration levels in the skin. This latest-generation moisturizer is formulated with niacinamide and plant extracts to restore the skin's radiance and reduce the appearance of fine lines and wrinkles whilst nourishing and comforting the skin.

PURE EXOSOMES + NIACINAMIDE + PLANT EXTRACTS +

# PDRN Rejuvenation

## SALMON DNA NUCLEOTIDES

PDRN is a naturally occurring substance derived from salmon. It stands for polydeoxyribonucleotides, which are fragments of DNA sourced from salmon sperm. Nucleotides extracted from salmon DNA are a highly compatible biological derivative that can support the cascade of bio-signaling involved in cellular repair. PDRN boosts skin rejuvenation and can visibly improve scarring and textural imperfections. Préime's PDRN range can be used as a standalone treatment or to aid repair and recovery following other aesthetic procedures and treatments.

**SOURCE:** Salmon DNA sourced from salmon trout sperm cells are 95% identical to human DNA. Nucleotide fragments are extracted, isolated and purified using a biotechnological process known as 'Nucleic Acid Extraction'.

**CONCENTRATION:** High quality 1% PDRN extract to provide superior results.

**ORIGIN:** The origin of salmon trout is sustainable and clean. Aquacultures use high quality water ensuring the fish are healthy and the production is free from contaminants. Fish health is constantly monitored to prevent disease outbreaks and ensure they are receiving optimal nutrition from sustainable sources. This maintains the health of the salmon trout and ensures that the DNA fragments produced are of the highest quality.

**PURITY:** Extraction techniques are minimally invasive and sterile to avoid harming the fish while ensuring a sustainable source of nucleic acid. The extraction procedure involves lysis, purification and recovery stages to ensure the purity of nucleotides from a sustainable source.

**EFFICACY:** Clinically-proven to repair damaged cells and rejuvenate the skin. Supports both the speed and quality of healing for more complete tissue regeneration.

**STABILITY:** The purification process allows the nucleotides to remain stable for up to three years at room temperature.

IN-CLINIC

## PDRN BOOSTER SOLUTION

Repairs and rejuvenates the skin, visibly improving the look of scarring, textural imperfections and overall skin texture. Suitable for acne scars, signs of ageing and tired, dull skin with uneven skin tone.

# NUCLEOTIDE

AT-HOME

## PDRN BOOSTER SERUM

A rejuvenating and hydrating face serum formulated to boost skin rejuvenation, balance skin tone and visibly improve skin imperfections. Its light texture with soothing actives is ideal for daily use or post-treatment recovery. Suitable for textural irregularities, signs of ageing, sensitive skin and immediately post-treatment.

**POLYDEOXYRIBONUCLEOTIDE +  
NIACINAMIDE +  
ADENOSINE +**

# Renew & Refine

## PLANT-BASED BIO-EXOSOMES

SCOPES

**SOURCE:** Three sustainable vegan plant sources each selected for their unique properties and potency: *Malus domestica* (Gala Apple), *Citrus reticulata* (Mandarin), and *Carica papaya* (Papaya).

**CONCENTRATION:** 15 million encapsulated nanosized vegan bio-exosomes.

**ORIGIN:** Organic farms in Italy, which significantly improves the yield and quality of bio-exosomes. Processing occurs locally to limit movement and preservation measures.

**PURITY:** Bio-exosomes are isolated using multiple stages of ultracentrifugation extraction, filtration and purification without the use of chemicals or solvents.

**EFFICACY:** This exclusive blend of bio-exosomes has clinically-demonstrated regenerative, anti-inflammatory and antioxidant effects on the skin, offering a powerful vegan alternative in regeneration without compromising purity or efficacy.

**STABILITY:** Bio-exosomes remain stable for up to two years at room temperature without the need for freeze-drying and reconstitution which can damage exosomes.

## IN-CLINIC

### RENEW BIO-EXOSOMES

A vegan regenerative solution that harnesses the power of 15 million encapsulated plant-based bio-exosomes to support skin renewal, refine skin texture and enhance overall skin radiance.

### SKIN LIFT

#### Multipeptide Lifting Solution

Visibly firms and tones the skin. It's lifting effect helps to reduce the appearance of fine lines and wrinkles.

#### INDICATIONS

- Aged skin
- Skin laxity
- Fine lines and wrinkles

#### RESULTS

- Improved skin elasticity and texture
- Visibly reduced fine lines and wrinkles
- Smooth, radiant, youthful-looking skin

# COCKTAIL

### SKIN RENEW

#### Skin Renewing Solution

Nourishes dehydrated skin and reduces the signs of environmental stress. It visibly plumps the skin and improves its radiance.

#### INDICATIONS

- Early signs of skin ageing
- Prejuvenation
- Dull and tired looking skin
- Early signs of photo-damage

#### RESULTS

- Improved skin texture
- Radiant, hydrated and glowing skin
- Improved skin tone
- Refreshed appearance

## Targeted Solutions

GLUTATHIONE +  
NIACINAMIDE +

### GLUTATHIONE + B3 Brightening Solution

Improves the visible signs of ageing, brightens the skin's complexion and reduces the appearance of dark spots.

#### INDICATIONS

- Dull and tired looking skin
- Pigmentation
- Photo-damaged skin

#### RESULTS

- Brighter and more even skin tone
- Reduction in appearance of dark spots
- Overall improvements in skin complexion

# SOLUTION

### ASCORBIC ACID + NT Antioxidant Radiance Solution

Improves the appearance of dull, photodamaged skin, and the visible effects of free radicals.

#### INDICATIONS

- Dull, sallow looking skin
- Pigmentation
- Photo-damaged skin
- Aged skin
- Environmentally-stressed skin

#### RESULTS

- Brighter and more even skin tone
- Reduction in appearance of hyperpigmentation
- Improved appearance of skin redness

NIACINAMIDE +  
TOCOPHERYL ACETATE +

# PRÉIME®

Bold Beauty, Powered By Science.

Préime, pronounced 'pre-may', is an adaptation of the Gaelic word *préimhe*, meaning premium. While the name is derived from the Gaelic language, its history and future reach around the globe. The name Préime represents high quality, high value and premium results.

Drawing on over 20 years of professional skincare experience, Préime products are created using the latest innovations in skincare science. The range includes regenerative solutions that represent a fusion of advanced scientific research and natural efficacy.

As part of its commitment to sustainability, Préime is the first aesthetic company certified as 'Plastic Neutral'. In collaboration with 4Ocean, Préime offsets its plastic footprint, removing one pound of trash from the world's oceans, rivers and coastlines for every product sold.
